EXPERIENCE

NorthStar PMO Analyst

LabVantage Solution

Aug 2023 - Present

Kolkata, India

- As an Analyst, I worked on enterprise resource planning (ERP) and customer relationship management (CRM) applications offered by Microsoft i.e. D365.
- Worked on Microsoft **Azure Logic Apps** where I designed a flow by which we can get the database information of the Production environment for audit purpose.
- Worked on a feature where we can move the time entries from one project to another project in which I contributed to validate the time entries after selecting the target project details & validate it after moving the time entries through **JavaScript**.
- Implemented some functionality, like when an employee's time entry got rejected, they should get a mail for this. Second, when someone enters an entry in excel, few people get notification by mail and all this I did using the **Power Automate flow**.
- Enhanced one feature in time entry forms using **JavaScript** where one field should automatically populate according to selection of task to avoid mistake by user.
- Worked on **Microsoft Visio** to create an entity relation diagram automatically by just providing an entity name.
- Led 6 members of Philippines Team where we setup the project for the project manager in MS D365 and did some cleaning activity in the system after analyzing the data.

LIMS based Internship
